*Obligatorio

Prueba Técnica

```
let athleteFinalPosition = 'first placea';
v switch(athleteFinalPosition){
    case 'first place': console.log('You get the
 gold medal!'); break;
    case 'second place': console.log('You get the
  silver medal!');break;
    case 'third place': console.log('You get the
 bronze medal!'); break;
    default: console.log('No medal awarded.');
 break;
 You get the bronze medal!
  error
  You get the gold medal!
No medal awarded.
¿Cómo verificamos que cierta function en Javascript sea compatible con los
navegadores? *
   Ejecutando la función en los navegadores más usados
Buscando la function en <a href="https://caniuse.com/">https://caniuse.com/</a>
   Todas las funciones son compatibles con los navegadores
```

¿Cúal es el resultado de ejecutar el siguiente código? * ▼ const playerFactory = (life, power, type)=>{ return { life, power, type, attack(player){ if(this.type === 'warrior'){ player.life -= this.power; } } const hero = playerFactory(100,10, 'hero'); const enemy = playerFactory(30, 5, 'warrior'); enemy.attack(hero) console.log(hero.life) 90 100

```
let retreatMessage = 'Retreat';

v const alienShip = {
    retreat:()=>{
        console.log(retreatMessage)
     },

v takeOff: ()=>{
        console.log('Spim... Borp... Glix...
Blastoff!')
     }
}

alienShip.retreat();
alienShip.takeOff();
```

- Retreat
- Spim... Borp... Glix... Blastoff!
- Retreat Spim... Borp... Glix... Blastoff!

¿Cúal es el resultado de ejecutar el siguiente código? * const cupsOfSugarNeeded =2; let cupsAdded= 0; **▼** do { cupsAdded++; } while(cupsAdded < cupsOfSugarNeeded)</pre> console.log(cupsAdded)

```
const satellite = 'The Moon'
const galaxy = 'The Milky Way'
const stars = 'North Star'

v const callMyNightSky = ()=>{
   return 'Night Sky: ' + satellite + ', ' +
   stars + ', and ' + galaxy;
}

console.log(callMyNightSky())
```

Night Sky:, and

- Night Sky: The Moon, North Star, and The Milky Way
- Night Sky: satellite, starts, and galaxy

¿Qué herramienta podemos usar para tener compatibilidad de Javascript con todos los navegadores? *

- Babel
- Rollup
- Webpack
- No se necesita, Javascript es compatible con todos los navegadores

```
const rapperArray = ["Lil' Kim", "Jay-Z",
  "Notorious B.I.G.", "Tupac"];

// Write your code below
for(let i=0;i<rapperArray.length;i++){
   console.log(rapperArray[i])
   if(rapperArray[i] === 'Notorious B.I.G.')
  break;
}</pre>
```

- Tupac
- Lil' Kim, Jay-Z, Notorious B.I.G.
- Notorious B.I.G.
- Lil' Kim, Jay-Z, Tupac

const entree = 'Enchiladas'
console.log(entree)
entree = 'Tacos'

- Enchiladas
- Error, una constante no puede ser re asignada
- undefined
- Tacos

```
v const robot = {
    _model: '1E78V2',
    _energyLevel: 100,
v get energyLevel(){
    if(typeof this._energyLevel === 'number'){
        return `My current energy level is ${this.
    _energyLevel}`
v }else{
    return 'System malfunction: cannot retrieve energy level'
    }
};
console.log(robot.energyLevel)
```
